

I Semester B.C.A. Degree Examination, November/December 2018  
(CBCS) (F+R) (2014 – 15 & Onwards)  
COMPUTER SCIENCE

BCA-103T : Problem Solving Techniques using C

Time : 3 Hours

Max. Marks : 70

**Instruction :** Answer all Sections.

**SECTION – A**

I. Answer any 10 questions.

(10×2=20)

- 1) Who developed C programming ? Write down the default value of char datatype.
- 2) Define an algorithm. Write down any two disadvantages of an algorithm.
- 3) What is qualifier ? List the qualifiers applied to the primitive datatypes.

4) What is the output of following code :

```
# define mul (a, b) a*b
void main ()
{
    int x = 5, y = 3, r;
    r = mul(x + y, x - y);
    printf(" r = % d", r);
}
```

- 5) Differentiate between break and exit statements.
- 6) Explain ternary operator with an example.
- 7) Write down any two disadvantages of an array.
- 8) Explain function prototype.
- 9) What is the difference between gets () and scanf() input functions ?
- 10) Define implicit and explicit type casting.
- 11) Define structure and union.
- 12) What is use of malloc() and calloc() functions ?

## SECTION – B

II. Answer **any 5** questions.

(5×10=50)

- 13) a) Explain characteristics of C. 5  
 b) Develop an algorithm to find smallest of three numbers. 5
- 14) a) If  $x = 50$  and  $y = 20$  then perform :  
 i)  $x \& y$       ii)  $x|y$  and      iii)  $x \wedge y$  5  
 b) Explain unformatted I/O functions. 5
- 15) a) Write a program to demonstrate call by value and call by reference. 5  
 b) Explain while and do-while control structures. 5
- 16) a) If city [ ] = "BENGALURU" then write the output using following functions :  
 i) `printf("%s", city);`  
 ii) `printf("%5s", city);`  
 iii) `printf("%10.6s", city);`  
 iv) `printf("% - 10.6s", city);`  
 v) `printf("%10.0s", city);` 5  
 b) Write a program to calculate  
 $NCR = N!/R!*(N - R)!$  using function. 5
- 17) a) Write a program to demonstrate structure. 5  
 b) Write a note on storage classes. 5
- 18) a) What is macro ? Explain macro definition with example. 5  
 b) Explain any five string operations with example. 5
- 19) a) Write a program to display fibonacci series using recursive function. 5  
 b) Write a program to copy contents of a file into another. 5
- 20) a) Write a program to concatenate two strings using pointers. 5  
 b) Explain file access methods in C. 5
